        {
            PhoneArray[position] = null;
            NbNumbers--;
            return true;
        }
        for (i=position; i<NbNumbers; i++)
        PhoneArray[i-1] = PhoneArray[i];
        NbNumbers--;
        return true;
    }

    public void printNumbers()
    {
        int i;

        if (NbNumbers == 0)
        System.out.println("Empty List");
        else
        for (i=0; i<NbNumbers; i++)
            System.out.println("Phone n. "+i+": "+PhoneArray[i].toString());
    }
}

```

7 B

For this assignment, you will write a Java class that implements the PhoneWidget interface. You must reuse a Java API class to write this class.

- A PhoneWidget object must have a method named getArea() that returns the area of the phone.
- A PhoneWidget object must have a method named getVolume() that returns the volume of the phone.

**You HAVE to reuse a Java API class to write this class.**

7 B

```
import java.awt.*;
import java.applet.*;

public class PhoneWidget extends Applet
{
    // The interface attributes
    TextField input = new TextField(10);
}
```
